

Thomas Sumser

Yokkaichi, Mie, Japan | 70-8372-2064 | bsumser@gmail.com | bsumser.dev | github.com/bsumser

TECHNICAL SKILLS

Languages: Python, C/C++, Golang, Typescript, SQL (PostgreSQL, SQLite), Elixir (Enthusiast), HTML/CSS
Frameworks & Web: React, Node.js, Phoenix / Elixir Ecosystem (Basics)
Databases & Cloud: PostgreSQL, SQLite, Database Schema Design, Docker, AWS (EC2), Nginx
Tools & Libraries: Git, Linux (Ubuntu/Arch), Make, XeLaTeX, Matplotlib

EXPERIENCE

English Instructor & Software Automation Developer

June 2026 – Present

Cris English School

Yokkaichi, Mie, Japan

- Engineered an end-to-end Python and LaTeX pipeline that parses bilingual datasets to generate custom crossword puzzles and printable PDF worksheets.
- Integrated Matplotlib and XeLaTeX via automated subprocess workflows to dynamically score grid placements, render custom image assets, and compile multi-page educational assets.
- Delivered structured English curriculum to diverse student groups, strengthening cross-cultural technical communication and adaptive instruction capabilities.

Code Sensei

September 2023 – April 2026

Code Ninjas

Eugene, OR

- Instructed students aged 7-12 in programming fundamentals, computational thinking, and JavaScript.
- Designed and built an adaptive input device using C, 3D printing, and custom circuitry to enable accessible hardware interaction for students with limited dexterity.
- Tailored algorithmic instruction to individual learning styles and problem-solving capacities.

PROJECTS

Portfolio & Data Analytics Application | *React, Golang, PostgreSQL, Docker, Nginx, AWS* June 2024 – Present

- Architected and deployed a full-stack web application backed by a Golang REST API, React frontend, and a PostgreSQL database.
- Designed relational PostgreSQL schemas and API endpoints to query and analyze large-scale Magic: The Gathering card datasets efficiently.
- Configured containerized application deployments using Docker and Nginx reverse proxying with CI/CD deployment automation.

Automated Sales Data & Analytics Pipeline | *Python, SQL, SQLite, Excel, Regex*

April 2025 – Present

- Engineered an end-to-end ETL pipeline in Python using regex to parse, clean, and extract unstructured text reports into a relational SQLite database.
- Designed a normalized database schema with foreign key constraints to enforce data integrity and enable efficient multi-dimensional querying.
- Connected the SQLite backend to interactive Microsoft Excel dashboards with Pivot Tables and Slicers, automating business intelligence delivery for non-technical stakeholders.

Quack Compiler | *C, Python, Make*

Apr 2024 – Jun 2024

- Developed a compiler for an object-oriented, single-inheritance language from design specification to MIPS assembly generation.
- Implemented Backus-Naur grammar parsing, static type checking, and semantic analysis based on formal language rules.
- Led implementation of the parsing and type-checking module using Python while assisting peers during weekly code review sprints.

EDUCATION

University of Oregon

Eugene, OR

Bachelor of Science in Computer Science, Minor in Mathematics

Sep. 2020 – June 2024

Relevant Coursework *Principles of Programming Languages, Compilers, Automata Theory, Computer Graphics*
